NORTH VALLEY DEMONSTRATION CANCER CENTRE

MEDICAL ONCOLOGY UNIT | SYNTHETIC DEMONSTRATION RECORD

ONCOLOGY CASE SUMMARY

Scanned-style clinical profile for software testing only

PATIENT DETAILS

Patient ID: DEMO-MTNBC-027 | Sex: Female | Age: 47 years
Date of birth: 08-May-1979 | Assessment date: 01-Nov-2026
Patient identity and all clinical details below are fictional.

HISTOPATHOLOGY & BIOMARKERS

Diagnosis: Histologically confirmed invasive breast carcinoma, triple-negative breast cancer (TNBC).
Estrogen receptor (ER): <1% (negative).
Progesterone receptor (PR): <1% (negative).
HER2: IHC score 0 (negative).

DISEASE STATUS

Current disease: Metastatic breast cancer with measurable soft-tissue lesion in the liver (RECIST 1.1 target lesion: 28 mm).
Bone-only disease: No.
Brain metastases: No known brain metastases; no neurological symptoms.
Prior metastatic-setting chemotherapy: 2 regimens completed.

PERFORMANCE STATUS & LABORATORY REVIEW

SYNTHETIC DEMO

ECOG performance status: 1.
Bone marrow function: Adequate per treating-team assessment.
Hepatic function: Adequate per treating-team assessment.
Renal function: Adequate per treating-team assessment.
Note: Numeric laboratory values are not supplied in this synthetic summary.

TREATMENT & EXCLUSION-RELATED HISTORY

Most recent anti-cancer therapy: Completed 6 weeks before assessment.
Prior PI3K inhibitor for breast cancer: No.
Unresolved acute toxicity from prior treatment: None reported.
Major surgery within the last 4 weeks: No.
Current systemic immunosuppressive therapy: No.
Pregnancy/lactation: Not applicable for this fictional case.

DEMO DATA QUALITY NOTE

This fictional profile was constructed to exercise selected published eligibility fields for NCT06189209 (Tenalisib, metastatic TNBC).
Potential alignment is not a clinical eligibility determination.
Numeric laboratory thresholds, full protocol criteria, site availability and investigator assessment must still be verified independently.
